Acknowledgements

This project was led and funded by the Defra DNA Centre of Excellence, which aims to transform Defra Group science to support policy and delivery by sharing and demonstrating the wider potential of existing methods; enabling the rapid development and trialling of new DNA based method applications; providing a focal point for leadership in Defra, UK and across other Government Departments; and building shared capability including skills and facilities.

Executive summary

Natural England is part of the Defra DNA Centre of Excellence, which champions the uptake of DNA based tools for monitoring the environment to inform its management and regulation. Natural England commissioned this report on behalf of the DNA Centre of Excellence. Natural England commission a range of reports from external contractors to provide evidence and advice to assist us in delivering our duties. The views in this report are those of the authors and do not necessarily represent those of Natural England or the DNA Centre of Excellence.

DNA – based methods offer a significant opportunity to monitor individual species and species assemblages where appropriate, for example those that may be difficult to monitor using traditional methods. However, with the exception of some individual species such as the great crested newt, there is still much development of these techniques required before they can be used in routine monitoring. Natural England has been developing the use of DNA-based methods for monitoring for several years and is a founding member of the Defra DNA Centre of Excellence, which was set up to encourage collaboration across the Defra group to progress the use of DNA based methods by tackling cross-cutting barriers

Gaps in DNA reference libraries of UK species were identified by the Defra DNA Centre of Excellence Working Group as one of the main barriers preventing the further uptake of DNA based methods for environmental species monitoring. This report details the formation of the UK Barcode of Life (UKBOL) steering group and progress in barcoding priority species.

DEFRA Centre of Excellence for DNA Methods:
Initiation of UKBOL and filling priority gaps

Benjamin Price¹, Raju Misra¹, Gavin Broad¹ and Katie Clark²

¹ **Natural History Museum, Cromwell Road, London**

² **Natural England, Rivers House, East Quay, Bridgwater**

Foreword

- There are approximately 76,000 eukaryote species recognised in the UK, the majority of which are poorly known.
- DNA barcoding uses a short, standardised segment of an organism's genome for identification by comparison to a reference library.
- The UK lags behind several countries in Europe and North America in that we lack trusted, openly accessible reference sequences for key UK taxa.
- A previous gap analysis of public DNA data in major DNA reference libraries highlighted that almost half the known UK species lack DNA barcode data and recommended the formation of a steering group to initiate a UK Barcode of Life (UKBOL) project, including the sequencing of priority species (Price et al. 2020).
- This interim report provides an overview of progress towards these two main goals.
- A steering group was formed, representing government agencies from the devolved nations, national repositories, sequencing centres and citizen scientists.
- Building on previous work the list of priority species was made available as a live and updatable online checklist, embedded in a project website (<https://www.ukbol.org/>).
- COVID-19 prevented the collection of fresh samples of priority species, thus samples already in hand were used.
- To date 1066 specimens of 742 species have been sequenced with corresponding specimen and sequence data made publicly available on BOLD.

1. Introduction

There are approximately 76,000 eukaryote species recognised in the UK, however the majority are poorly known. For those few species with sufficient data, their abundance and distribution have, on average, declined since 1970 and of the 8,431 species that have been formally assessed, 15% are threatened with extinction and 133 species are already extinct in the UK (Hayhow and others, 2019).

In parallel there is a decline in our taxonomic capacity. For various groups of organisms, including some of our most species-rich groups, we lack the national capacity to identify species. This national shortfall prompted the House of Lords Science and Technology Committee to launch two inquiries into the state of systematics research and taxonomy (House of Lords, 2001-02 and 2007-08). Among their recommendations was to increase our capacity for high throughput molecular identifications, including “DNA barcoding”, specifically:

“The Committee is concerned about lack of co-ordination of barcoding effort nationally and about the potential for duplication of effort. The efficiency of barcoding as a diagnostic technique increases in proportion to the number of different species barcodes available for comparison.” (House of Lords, 2007-08)

DNA barcoding uses a short, standardized segment of an organism’s genome for identification, much like the barcodes found on commercial products (Hebert and others, 2003). These DNA-based identifications require comparison to reference libraries of DNA barcodes sequenced from identified individuals, typically deposited in natural history collections. See Price and others (2020) for additional background information.

The UK lags behind several countries in Europe and North America in that we lack trusted, reliable and openly accessible reference sequences for key UK taxa. A previous gap analysis of public DNA data in major DNA reference libraries highlighted that almost half the known UK species lack DNA barcode data, and that quality assurance is variable for those with data (Price and others, 2020). The previous report recommended the formation of a steering group to initiate a UK Barcode of Life (UKBOL) project to coordinate UK barcoding and begin sequencing priority species (Price and others, 2020).

2. Aims and Objectives

This project aims to deliver on several of the actions previously identified in Price and others (2020), specifically to: (1) Initiate a Steering Group for the UK barcode of life project, with appropriate documentation; (2) List, collect and sequence priority species. Here we report on the progress towards these overarching objectives.

Objective 1: Steering Group

Summary

The objective was to form a steering group with appropriate documentation and hold an initial meeting to agree further work. To maximize representation, organisations were initially invited on to the steering group to represent each devolved government, including government agencies, national repositories, species-based NGO's, recording schemes and sequencing facilities. Steering group membership is reviewed at each quarterly meeting.

Outputs

1. First steering group virtual meeting held
2. Terms of Reference drafted
3. 5-year plan drafted
4. Task and Finish groups formed

Progress

Initial steering group membership was decided in consultation with the Defra DNA CoE (Table 1) with the first meeting held 25/03/2021. A representative for Northern Ireland has not yet been identified. The Terms of Reference (Appendix 1) were agreed by the steering group. The 5-year plan has not yet been drafted. The steering group agreed that there was a need for coordination and expansion of DNA barcoding in the UK, and that the UKBOL project could achieve this. Large-scale funding was identified as the primary limitation to comprehensive species coverage, as previously identified (Price and others, 2020).

Table 1: Current UKBOL steering group membership.

Nation	Organisation Name	Organisation Role	Representative
England	Natural History Museum	Voucher repository; Sequencing centre	Raju Misra
	Royal Botanic Gardens, Kew	Voucher repository; Sequencing centre	Ester Gaya / Brian Douglas

	Wellcome Sanger Institute	Sequencing centre	Mara Lawniczak
	Rethink Nature Partnership Biological Records Centre (UKCEH) Natural History Museum	NGO coordination Citizen Science UKBOL coordinator	Craig Macadam David Roy Ben Price

Task and Finish groups were presented to the steering group (Table 2) and are currently being taken forward by members of the group. The project website is available at: <https://www.ukbol.org/> .

Table 2: Task and Finish groups established by the steering group and their current objectives.

Task & Finish Group	Objectives
Communication and engagement	1. Develop a website (http://ukbol.org/) and social media presence. 2. Develop an engagement plan for collectors and taxon experts. 3. Advertise project to relevant groups.
Data standards	1. Publish data standards for UKBOL compliant data. 2. Assist with data curation on BOLD, e.g.: a. BIN with multiple names b. Names with multiple BINS
Priority species	1. Develop and maintain priority species list a. Current list: https://tinyurl.com/PrioritySpecies. 2. Facilitate collection of priority species.
Field SOPs	1. Develop taxon-specific field Standard Operating Procedures.
Lab SOPs	1. Develop lab Standard Operating Procedures 2. Develop sequence assembly and BOLD upload pipeline.
Data portal	1. Scope requirements for UK barcoding data portal. 2. Build data portal and link to project website.

Objective 2: Priority species listed, collected, and sequenced

Summary

Previous work highlighted that half the UK species lack DNA barcode data (Price and others, 2020). This project was tasked with developing a priority species list for collection and DNA barcoding, collect relevant species in the field and sequence standard DNA barcodes which are then uploaded to BOLD.

Outputs

1. Priority species list drafted.
2. Priority species (1500) collected by Natural England and other stakeholders.
3. Priority species (1500) barcoded by NHM and uploaded to BOLD.

Progress

Species list

The priority list developed by previous consultation (Price and others, 2020) was converted into a live checklist which updates daily. The checklist is embedded into the UKBOL website: <https://www.ukbol.org/data-portal.html> or can be accessed directly via: <https://tinyurl.com/PrioritySpecies>

The list checks the NHM data portal (<https://data.nhm.ac.uk/>) to update if samples are available for DNA barcoding, thereby reducing potential duplication of effort in collecting additional specimens. The list also checks the BOLD database (<http://www.boldsystems.org/>) to update if DNA barcode data are now available for each species, either without a geographic restriction, or restricted to specimens collected in the UK (Figures 1 and 2).

different source projects. Relevant projects already on BOLD were also associated with the UKBOL container and corresponding specimens were incorporated into the UKBOL dataset (Table 3). While account registration (free) is required to contribute to the project, the samples and sequences are publicly visible in search results and can be used for DNA-based identification. To retrieve barcodes restricted to the UKBOL dataset use:

http://www.boldsystems.org/index.php/Public_SearchTerms?query=DS-UKBOL

Table 3: Projects associated with the UKBOL project on BOLD and current totals

Project	Description	Specimens	Species
Newly created:			
ANBIO	“Ainsdale BioBlitz”: Natural England and NHM BioBlitz held at Ainsdale NNR July 2019.	420	200
FBUK	“FreshBase UK”: Freshwater invertebrates collected for barcoding and genomics.	426	411
UKAN	“UK Barcoding – Animals”: General project for UK animal barcoding.	220	153
Other projects:			
BEEEE	“British Bee COI database”. See Tang and others (2017) for further information.	448	226
FPUK	“Flowering Plants of the United Kingdom”. See Jones and others (2021) for further information.	4750	1455
DTNHM	“Darwin Tree of Life (NHM)”. Samples barcoded as part of ID check for whole genome sequencing.	1071	220

Standard COI barcoding was undertaken at NHM for 1066 specimens of 742 different species (Table 4). These specimens were previously collected for other ongoing projects (see Appendices 2 – 4 for specimen details). Samples were databased, imaged and then dissected or tissue subsampled as appropriate for the taxon group. In the case of very small specimens the whole body was used for DNA extraction, with the voucher recovered after the extraction was completed.

For the “FBUK” and “UKAN” projects DNA was extracted using the [KAPA Express Extraction Kit](#), then amplified using standard in-house protocols and group-specific barcoding primers. Resulting amplicons were sequenced bidirectionally on an Applied Biosystems 3730XL sequencer, contigs were assembled using CodonCode Aligner and then aligned and checked manually using MEGA X (Kumar and others, 2018).

For the “ANBIO” project DNA was extracted using 5% Chelex resin in TE buffer with ProK at 56°C for 30min, followed by a one-step PCR with uniquely indexed LCO/HCO primers (Folmer and others, 1994). Resulting amplicons were sequenced on a MinION (Oxford Nanopore), using a single R9 flowcell, and demultiplexed using ONTbarcode (Srivathsan and others, 2021).

Of the 1066 specimens, 837 produced a DNA barcode sequence, while the remaining 229 either failed to amplify due to age / preservation / primer mismatch; produced a barcode with more than 1% ambiguous bases; or resulted in a non-target barcode sequence (i.e., a known contaminant such as human or microbial) which were subsequently excluded from BOLD pending additional sequencing. In addition to the sequencing undertaken in this project the other projects now included within the UKBOL dataset include a further 6,269 specimens corresponding to a further 1,901 species (Table 3).

Table 4: Summary of samples and species sequenced to date under the UKBOL project

Phylum	Class	Order	# Samples	# Species

Total			1066	742

3. Next steps

As monitoring programmes begin to incorporate more DNA-based techniques to identify species, filling the gaps in UK DNA reference libraries becomes more important to the success of these programmes. The UKBOL project is uniquely set up to do this in the UK and is currently funded to sequence priority species identified during the previous consultation, however this only covers a tiny proportion of the UK species currently missing barcode data.

The next steps for the project are to (1) tackle the objectives listed in each Task and Finish groups (Table 2); (2) secure large-scale funding to fill the remaining gaps, enabling comprehensive DNA-based biodiversity exploration and monitoring through such initiatives as the Natural Capital and Ecosystem Assessment programme; (3) additionally, several projects based in UK overseas territories are beginning to incorporate DNA-based identification and should be incorporated into the UKBOL network.

Appendix 1 - UK Barcode of Life (UKBOL): Terms of Reference

Date	Version	Author(s)	Notes
2021-03-23	0.1	Ben Price	Initial draft
2021-03-27	1.0	Ben Price	Minor updates following steering group meeting.

Background and Purpose

There are approximately 76,000 eukaryote species in the UK, and while we know some of them in detail, the majority of these species are poorly known, and hundreds of new species are discovered each year. DNA-based methods, such as barcoding, offer an opportunity to greatly improve our understanding of biodiversity from individual, bulk or environmental samples. DNA barcoding uses short, standardised segment(s) of an organism's genome for identification by comparison to a reference library; however, the UK lacks reliable and openly accessible reference sequences for key taxa. Gaps in DNA reference libraries of UK species were identified by the Defra DNA Centre of Excellence Working Group as one of the main barriers preventing the further uptake of DNA based methods for environmental species monitoring (see report: [Price et al. 2020](#)).

The UK Barcode of Life (UKBOL) steering group aims to coordinate the development of comprehensive DNA reference libraries for all UK eukaryote species. The steering group was established by the Defra Centre of Excellence for DNA in March 2021. The group is coordinated by Ben Price (Natural History Museum, London) with membership reviewed quarterly.

Aims

- Coordinate voucher collection and DNA barcoding activities between partner organisations.
- Identify and secure funding to enable comprehensive UK species coverage.
- Identify and establish "Task and Finish" working groups.

Meetings

Steering group meetings will be held quarterly and will be online / conference calls. If members are not able to attend, they may nominate a deputy. Task and Finish working

group meetings will be held online as required. The coordinator (Ben Price) will organise the steering group meetings and chair the first meeting, with subsequent chairing arrangements agreed at the first meeting. Topics for the agenda are to be emailed to the coordinator (Ben Price) in advance of the meeting, though smaller items can be brought up in the AOB section as required. The meeting agenda and relevant documents will be circulated in advance of each meeting. Meetings will be recorded and agreed actions will be circulated after each meeting.

Membership

While the wider project will be open to all, current membership of the steering group will be initially limited to a few representative organisations in the devolved nations (see table below). Additional members will be based on majority agreement of the current steering group members. Steering group membership will be reviewed at each meeting. Each member of the steering group is responsible for representing their organisation at meetings and communicating with other stakeholders they represent.

Nation	Organisation Name	Organisation Role	Representative
England	Natural History Museum	Voucher repository; Sequencing center	Raju Misra
	Royal Botanic Gardens Kew	Voucher repository; Sequencing center	Ester Gaya
	Natural England	Government Agency	Katie Clark
	CEFAS	Government Agency	David Bass
Scotland	Royal Botanic Gardens Edinburgh	Voucher repository; Sequencing center	Peter Hollingsworth
	National Museums Scotland	Voucher repository; Sequencing center	Vladimir Blagoderov
	Marine Scotland	Government Agency	Iveta Matejusova
	NatureScot	Government Agency	Colin Bean
Wales	National Botanic Gardens	Voucher repository; Sequencing center	Natasha de Vere / Laura Jones
	Natural Resources Wales	Government Agency	Emma Keenan

Northern Ireland	Department of Agriculture, Environment and Rural Affairs	Government Agency	T.B.C.
Wider UK	Joint Nature Conservation Committee	Government Agency	Paul Woodcock
	Wellcome Sanger Institute	Sequencing center	Mara Lawniczak

Ways of working

The steering group will identify and initiate “Task and Finish” working groups to deal with various aspects of the project as needed. These groups will meet independently and report back to the steering group as needed.

Communication

Group members will share information and resources via email. Document storage will be provided by NHM through SharePoint or similar and will be facilitated by the coordinator. Document storage will be reviewed once a project website is online.

Deliverables

1. Regular steering group meetings held.
2. Task and Finish working groups identified and established with timelines for delivery.
3. 5-year plan developed.
4. Business case developed for large-scale funding.
5. Priority species collected and sequenced.

Review

The project goals and terms of reference will be reviewed at the first meeting each calendar year.
